

FUEL INJECTOR AIR INTAKE CLEANER

Penray 2412 Fuel Injector Air Intake Cleaner quickly dissolves and helps remove sticky gums, carbon, soil and resin deposits that prevent proper air flow. A special all-angle spray valve allows container to be held at any angle which assures proper spray and pressure penetration to optimize deposit removal. Formulated to be safe for protective coatings and air intake systems.

Features and Benefits:

- Quietly dissolves and helps remove sticky gum, varnish and resin deposits
- Safe for protective coatings and all air intake systems
- May also be used to clean linkages, cables, actuators, and PCV valves
- Not for sale in CA, UT and other states as they adopt the 2014 OTC Model Rule

Throttle Body

The throttle body connects the air intake to the engine. It contains the throttle control plate which opens to direct air flow into the engine. Maintaining a clean throttle body will prevent carbon buildup which causes rough idle and poor performance.
