

DIESEL STORAGE TANK CLEANING “TANK-TO-TRUCK”

Diesel fuel is inherently unstable allowing solids to form leading to sludge. Ruined equipment, loss of production and truck injector issues all result from dirty fuel. Prevent customers from receiving bad diesel fuel. Contact Penray for timely, cost effective, solutions to diesel fuel storage problems.

PROBLEMS:

- Clogged fuel filter & corroded injectors
- Costly downtime & cold weather vehicle freeze-up
- Reduced fuel economy
- Loss of vehicle power
- Tank pitting & corrosion
- Frequent re-gen cycles (more fuel used to clean DPF)

CAUSE: Water creates a breeding ground for microbes (bacteria)

- Tank vents let in air, water and dust
- Manway covers not sealed allow water and dirt into fuel

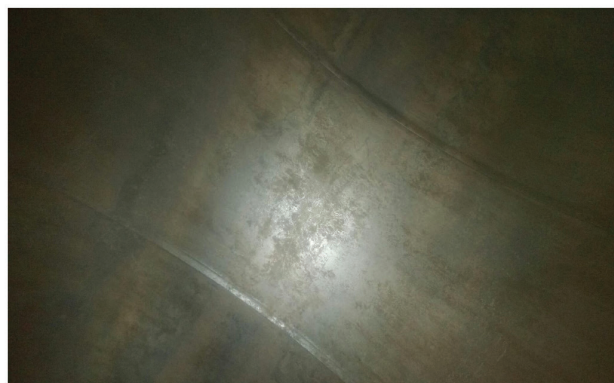

SOLUTION: PENRAY FUEL DR. PROGRAM

- Year-round preventative service to treat/maintain diesel fuel
- Bi-annual fuel physicals assess condition of tank contents
 - ongoing treatment and testing maintains healthy fuel
- Fuel expert customers can trust

RESULT: *Happy customers--100% satisfaction guarantee*
